<b>Your story</b>	<p>It would be wise to disclose the facts relating to causation of fire conditions and subsequent fire activity. Most notably, the number of arrests/charges relating to arson during the period (2019/2020) in which the bushfires were raging the state. These numbers should reflect a direct link between cause and effect.</p> <p>Ongoing drought conditions which have been well documented over the past 230 years would likely provide optimal conditions for bushfires. This, combined with the historic record of previous bushfires that have affected parts of the country should be considered, and not to be confused or conflated with the presumption of undocumented and unobserved impacts implied by various climate theories.</p> <p>Reliance on fact is crucial in future management of our bushfire prone country, and when presented with hype, theory and</p>

presumption, one should be extremely cautious and conservative.

Thanks.

---

**1.1 Causes and contributing factors**

Arsen.

---

**1.2 Preparation and planning**

Well resourced incident/emergency agencies.

---

**1.3 Response to bushfires**

Critical thinking and considered means for support and rebuilding.

---

**1.4 Any other matters**

Don't believe the hype.
