<b>Your story</b>	<p>We set up to protect our &amp; other businesses at latta'spoint where we have a lot of plastic&amp;timber products used in aquaculture highly combustible materials.As the road was cut our only way in was by boat to defend this fire ,as the fire front tore through from the hot nth west wind &amp; budd island came under ember attack from ember's crossing the river we assisted in bringing that fire under control with the help of a southerly wind change which pushed the fire away from the sheds on the island to the other side of island to the water line . Then back to the mainland to check to see if everything was alright which it was , In the meantime power was gone &amp; it was time to get out &amp; go &amp; protect our home . On returning the next day we walked into the bush to see how close it got to the property behind us as there was no one there ,this property had a hazard reduction burn some 16 month's before there so as the fire hit this property as wind turned to the south it went into a slow burn which we were able to put out using 60 20lt buckets of water then returned with another</p>

20 the next day just to make sure .. my reasons for telling this experience is the hazard reduction burn which rfs did saved our business & plenty of others .. I have all this on film cheers Stuart Kennedy
