| Your story | <p>1. Experimental block done by the forestry comission years ago. Euston Boundary road. It should be inspected by people who know nothing about the bush. Have spoken to David Gillespe who wants to inspect it. There is a federal inquiry as well as state inquiry. Currently at inquiry number 14.</p> <p>2. Forestry had plan called TSI. They went through the bush and took out all usless timber. It produced beautiful bush. Then they gave national parks authority to look after the bush which wasnt done very well. There was no access to the bush and all the timber was left there again which never grew. This is the area that causes the fire as all the timber is left around. This is what kills the wildlife and is out of control. If you go out internal break road you will see what should happen with the bush.</p> <p>Happy to eleborate futher at the meet. May have been recruited to speak at federal iquiry by David Gilespie. All enquiries in the past havent achieved too much.</p> |
|-------------------|--|

Back in 1950 we had just as bad fires and there was no fire tankers at all. Now we have 800 and we cant control fires.

1.1 Causes and contributing factors

1.2 Preparation and planning

1.3 Response to bushfires

1.4 Any other matters
