Share your experience or tell your story

Your story	A flood irrigation dam needs to be built where the warragamba river joins the nepean river to slow down the pace of the water, then on both sides where possible of the nepean and hawkesbury rivers dig deep trenches and deep empty ponds so as the water goes down and not up and this water can be piped to farmers in times of drought. simples right! why wasnt water released
-------------------	--

from the dam in a trickle effect rather than ten million litres all at once and you wonder why it floods?
